
HAWK+

Version 1.0

Vision Statement

For KU students, staff, and faculty who need an accessible and efficient method of booking appointments with healthcare providers at Watkins Health Center. The product Jayhawk + is a web application that provides an effortless way to navigate and connect to healthcare providers at the convenience of your fingertips. Unlike traditional walk ins and call ins which are very tedious, Jayhawk + gives users the control to be able access healthcare providers as quickly as possible. Our product enables numerous users at the University of Kansas to access bookings simultaneously rather than waiting on call or changing your schedule to physically walk in. This is difficult for off-campus students who must commute to campus to schedule an appointment. Jayhawk + is a unique approach to solve this inconvenience of physical walk-ins or on-call appointments for 28,000-30,000 individuals studying, working, or teaching at the University of Kansas because it is much faster than the currently available alternative. Jayhawk + also provides Watkins Health Center faculty with better efficient ways of managing numerous appointments and provides them with flexibility in their work.
